## DETAILED ACTION

### *Claim Rejections - 35 USC § 101*

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 16 and 17 are rejected under 35 U.S.C. 101 because:

For claim 16, the claimed invention is directed to non-statutory subject matter. The claim 16 does not provide a **practical application** that produces a useful, tangible and concrete result. For an invention to be “useful” it must satisfy the utility requirement provides that the utility of an invention has to be (i) specific, (ii) substantial and (iii) credible. MPEP 2107 and Fisher, 421 F.3d at \_\_\_, 76 USPQ2d at 1230 (citing the Utility Guidelines with approval for interpretation of “specific” and “substantial”). The “tangible” require that the claim must recite more than a §101 judicial exception, in that the process claim must set forth a practical application of that §101 judicial exception to produce a real-world result. Benson, 409 U.S. at 71-72, 175 USPQ at 676-77 (invention ineligible because had “no substantial practical application”). The “concrete” result must have a result that can be substantially repeatable or the process must substantially produce the same result again. In re Swartz, 232 F. 3d 862, 864, 56 USPQ2d 1703, 1704 (Fed. Cir. 2000)(where asserted result produced by the claimed invention is “irreproducible” claim should be rejected under section 101).

Referring to dependent claim 17, the claim 17 refers to the claim 16. Therefore, it is rejected same as claim 16 under 35 U.S.C. 101.

Appropriate correction is required.

***Allowable Subject Matter***

3. Claims 1, 3-15 and 18 allowed.
4. The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest an a method or system for capturing an image, comprising specifying a user-adjustable sclera setting corresponding to a threshold amount of sclera desired to be present in a captured image with respect to faces in the captured images; storing the sclera setting in a memory; capturing a image when the determined amount of sclera of each of the faces in the image preview is at least equal to the sclera setting; and used in combination with all of the other limitations of the claims 1 and 6.

***Conclusion***
